- **No heavy machinery (eg. trucks and F.E.L.'s)**
- **No outside soil contamination**
- **Reusing your own sand from below**
- **Release of dormant nutrients**
- **No more layering of the profile**

### City of Nedlands

Dominic O'Connell, with the help of Sports Turf Technology, identified factors that were limiting the quality of turf at Allen Park in 2002. These factors included compaction, which was resulting in low infiltration rates and poor turf density. An uneven surface was also a problem that affected oval maintenance and cricket during the summer period. To overcome these problems Dominic decided to use the Recycling Dresser. The turf recovered much quicker from this process than the traditional method of coring and sanding. Dominic is convinced that the Recycling Dresser suits his needs – gets the job done quickly and overcomes the compaction problem.

Dear Mr Parker,

It gives me great pleasure in advising you that Curtin University wishes to acknowledge the services that you have provided for Parks & Gardens over the last 5 years.

As you are aware we have had a number of problems with our turf facilities, particularly on our sporting ovals.

Last year you carried out significant renovation work on Edinburgh Oval with your recycling dresser and top field maker in order to alleviate poor water infiltration and a lack of established root development in the soil profile.

This year we have seen a considerable improvement in the oval with the grass requiring less water during the hottest periods of the year and also a denser coverage of kikuyu stolons.

I would also like to take this opportunity in thanking you for your teams technical expertise and your all round professional service that you provide. This coupled with your support to the Turf Grass Association (WA) and the Institute Of Horticulture (WA) has certainly made The Lawn Doctor an industry leader in its field.

Yours sincerely  
 Matthew Lunn
