1.2m ideal for small areas or for doing around sprinklers

Fairways are quickly treated and vacuumed ready for play

Shire ovals (annual vertimowing renovation)

- All our verti mowers are Turf Tec Built, a WA owned and operated manufacturer. This guarantees we have immediate part replacement and therefore minimal downtime.

- Available machines sizes are 1.2m, 1.6m, 2.0m and 4.6m. Lawn Doctor has a wide range of machines available to remove thatch from small quadrangle areas up to large sporting ovals and golf course fairways. The 1.2m machine is also ideal for around sprinklers and valve boxes.

■ **Blade configurations are:**

- Depths up to 75mm
- All Tungsten tipped
- 38mm spacings
- 3mm cutting face
- All on spiral shafts

- All shafts are fitted with the same configuration so uniformity is guaranteed no matter what machine width is used.

- Easy adjustment depth settings. Adjustable rollers allow for simple, fast and effective depth settings to suit different thatch levels.

- Rear discharge of verti mowing debris. Ensures all debris sits on the surface and is not travelled over, therefore more material is easily removed from the surface via vacuums

- Gearboxes that drive blades into the grain and not with it. Some verti mower blades travel in the same direction as the machine, this removes the bare minimum. By vertically cutting against the grain and into the verdure more thatch is removed in a single pass providing better value for money.

Deep Scarifying

Uniform Cutting

Working into the grain removes more thatch
