

Easy Maintenance

If you are looking for a lawn that is less work and maintenance then Sir Walter Premium Turf is the lawn for you. Its fast growing habit means that damage is repaired more quickly and its low thatch habit forms a tight sward that keeps moisture in and weeds out. It is also resistant to many insects and fungicidal pests, which means less spraying and therefore better for you and the environment. If spraying does however become necessary over the lifetime of your lawn it is the only buffalo grass that can handle being treated without retardation in its growth pattern.

Because of Sir Walter's growth pattern it is non invasive to your garden areas and paving. This means an occasional mechanical edge is all that is necessary to keep your lawn areas separate, no digging! Unlike couch the home gardener can also achieve a professional mowing result using a rotary type mower.

Sir Walters low thatch habit means it also doesn't need annual verti mowing like couch varieties.

Guaranteed Authenticity and Quality Assured.

Sir Walter Premium Turf can only be sold by a licensed agent. A certificate of authenticity is supplied with each purchase to ensure the premium grass you are being supplied is Sir Walter. There are many cheaper and inferior versions of soft leaf buffalo available. This is why Sir Walter is the only grass type to be regularly audited by the licensor to ensure the standard and quality of the grass you are receiving is at a premium.

- Softer & Tougher

UNMATCHED PERFORMANCE

When only the best will do

LAWN DOCTOR Turf Farms

Why you would pay more for a premium grass

It is all a matter of if you want the best lawn in the street. Have you ever driven along a street and really looked at the lawns. Many leave a lot to be desired. First impressions are very important and everybody agrees a great garden can add value and prestige to your home. Spending a little more in the initial stage will ensure that you get years of value. If you want a lawn with superior colour, easy maintenance, and is hard wearing then you can't go past Sir Walter Premium Turf. Lawn Doctor turf farms are the home of Sir Walter and our commitment to quality doesn't just end at the gate. We will give you continual advice and support for the lifetime of your Sir Walter.

Australian Born and Bred

Sir Walter Premium Turf has been born and bred under tough Australian conditions. This makes it better suited to our unique and challenging environment. It has had to undergo a stringent testing period during licensing with the plant breeders registration to ensure it can live up to the breeders expectations. Other generic types of soft leaf and velvet buffalo have not been tested to ensure they can stand up to the extremes of our climate. Another advantage is it can be established in your garden all year round. This means if installed in winter it will not create a problem with water restrictions.

Softer than soft

Sir Walter should never be confused with the prickly predecessors that we are familiar with. One of the best things about Sir Walter is the luxurious feel of the leaf under foot that will not irritate even the most tender of skins.

Tougher than tough

Sir Walter Premium Turf is the perfect choice for the Australian family. It's remarkably hard wearing and since it does not go dormant, it is self-repairing, allowing it to quickly recover. This makes it perfect for pets, kids play areas and under clotheslines.

“If you want a lawn with superior colour, easy maintenance, and is hard wearing then you can't go past Sir Walter Premium Turf.”

Drought tolerant

Due to Sir Walter's deep roots, low thatch habit and tight growth sward it is able to withstand longer periods without water. This makes it the perfect choice for the water wise household that is necessary in Western Australia. For this reason it also stays greener throughout summer and winter and does not lose its colour like couches and other varieties of soft leaf or velvet buffalo.

Proven shade tolerance

Establishing good growth in shady areas is a common problem in our lawn areas. This is another good reason for choosing Sir Walter. Not only does it have superior shade tolerance, it can also handle reasonable wear and tear in these areas. Most grass types that do well in the shade cannot handle the direct sunlight, unlike Sir Walter Premium Turf that thrives under a blazing sun.
